SUMMARY

Python and platform engineer working at the seam between enterprise automation and modern software practice. I orchestrate production automations from Apache Airflow DAGs and build the services around them — FastAPI backends, Docker deployment, versioned migrations, CI/CD. Enterprise RPA is where I came from and where I learned what brittle automation costs; my work now is putting scheduling, retries, version control and observability around processes that had none.

TECHNICAL SKILLS

Languages: Python, TypeScript / JavaScript (Node.js), SQL

Orchestration: Apache Airflow 3.x (DAG design, scheduling, retries, failure handling), cross-system job orchestration

Platform: Docker, Docker Compose, GitHub Actions CI/CD, Git workflows, versioned DB migrations

Backend & Data: FastAPI, Node.js, Express, REST API design, JWT / RBAC auth, PostgreSQL, MongoDB, Supabase, MinIO, Qdrant

Automation: UiPath, Automation Anywhere, Power Automate, Playwright (Python browser automation)

EXPERIENCE

Full-Stack Developer & RPA Engineer

Jan 2025 – Present

Nartex Software — software development consultancy

Remote / Seville, Spain

- Orchestrating production automations from **Apache Airflow 3.x** DAGs — putting scheduling, dependency management, retry logic and observability around UiPath robots that previously ran as isolated scheduled tasks.
- Deliver production Python and TypeScript services alongside the automation work: FastAPI backends, React / Next.js frontends, Docker Compose deployment and versioned database migrations, in a four-developer team.
- Introduced Git workflow, shared component libraries and **GitHub Actions CI/CD** to a team that had previously worked only in low-code RPA tooling — the first version control that codebase had.
- Build and maintain UiPath automations for government-sector clients, removing **50 hours/month** of manual processing, within a five-person automation team.

RPA Developer & Support Team Lead

Jul 2023 – Jan 2025

MCCM Innovations — AI & automation agency · Siemens Gamesa account

Remote / Cádiz, Spain

- Built UiPath, Automation Anywhere and Power Automate automations: SAP/Excel reconciliation for the logistics department, and email-to-portal routing of turbine incident and missing-part reports; maintained 6 more.
- Contributed, as part of the development and support team, to automating SCADA incident handling for a separate business unit — the client reported the process going **from 80 staff to 8**, with the remainder redeployed onto higher-value work.
- Led a four-person support team; cut average ticket resolution **from 48h to 4h** by replacing one-off fixes with a library of reusable components.

Earlier: seven years in hospitality (front desk, international guests, English/Spanish/basic German) while self-funding a twelve-month intensive retraining into software development. 2016–2023.

SELECTED PROJECT

Relaxzy — Booking Platform — production; business I co-own and operate

Next.js · TypeScript · Prisma · PostgreSQL · Supabase · Stripe · Vercel

- Full-stack booking system with real-time availability, automated reminders, payments and i18n. Cut no-shows **from 20% to under 3%**; used daily by seven staff across three roles.

CERTIFICATIONS

UiPath Advanced RPA Developer · Automation Anywhere Bot Developer · Certified Scrum Master · CompTIA Security+

EDUCATION

Physics coursework, 2 years toward B.Sc. — UNED (remote), 2020–2022

Computational physics: numerical methods, MATLAB, C

B.A. Tourism & Hospitality Management — Universidad de Cádiz, 2017
